Serial No.: 09/456,105
Attorney Docket No.: 07447-0043

AGENDA

1. Applicants' Device:

- Applicants' device is directed to a method and apparatus for displaying registered information.

- In the specification, registered information is not simply retrieved by decoding embedded information from the surface of a substrate and then parsing the decoded information.

- The claims recite a method for capturing coded embedded glyph data from a substrate having first image information; decoding the coded embedded glyph data to develop registration information; and displaying second information registered with the first information based on the registration information.

2. Cited Prior Art:

- Daniele discloses a reference that decodes information from a document, parses the information and then displays the information to a user.

3. Argument:

- Daniele fails to disclose the capability to decode the coded embedded glyph data to develop registration information; and then display second information registered with the first information based on the registration information.
